## Hay Oats - WA

**Mulgara<sup>Ⓛ</sup>**

- Wintaroo maturity with improved disease resistance and hay quality
- Good grain yield and quality with high protein and low screenings
- Care with plant density required due to large grain size

**Tungoo<sup>Ⓛ</sup>**

- Kangaroo replacement with improved hay quality
- Broad spectrum of disease resistance
- Only variety available with red leather leaf resistance

**Tammar<sup>Ⓛ</sup>**

- Flexibility in cutting times with good hay quality (digestibility/ADF)
- Broad spectrum of disease resistance and good grain yield

**Forester<sup>Ⓛ</sup>**

- Suited to high rainfall and irrigation
- Excellent early vigour and foliar disease resistance
- Seed available from AGF Seeds

<sup>1</sup> Disease reactions where R= resistant, MR=moderately resistant, MS=moderately susceptible, S= susceptible, VS=very susceptible

<sup>2</sup> T=tolerant, MT= moderately tolerant, MI=moderately intolerant, I=intolerant <sup>3</sup> F=fine, MF=moderately fine, MT=moderately thick, T=thick, VT=very thick

Note: Stem rust, leaf rust, BYDV & Septoria reactions are from WA trials, Bacterial blight, CCN & red leather leaf reactions are from SA trials

**(Rust and BYDV reactions may vary in different regions and with different seasonal conditions depending on the prevalent pathotype/serotype. Monitoring your oat crop is therefore essential.)**
